```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence represents a human secreted protein amino acid sequence. The invention relates to sequences AAA87725-A87774 which encode human secreted proteins AAB25763-B2512. The proteins include signal peptides. Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for

Claim 9; Fig 12; 306pp; English.

procedures.

Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome mapping

WPI; 2000-442637/38. N-PSDB; AAA87726.

The cDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins. The cDNAs may also be useful in diagnostic, forensic, gene therapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, obesity, mitochondriogytopathies, diabetes, atheroselerosis, neurodegenerative disorders, graft rejection, Alzheimer's disease, dementia, hyperlipidaemia, septic shock and impotence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a human carbohydrate-modifying enzyme (CME). CME CC polynucleotides and polypeptides are useful for treating and diagnosing CC diseases associated with CME such as diabetes, autoimmune/inflammatory CC disorders such as AIDS, Addison's disease, adult respiratory distress syndrome, allergies, anaemia, asthma, atherosclerosis, autoimmune CC thyroiditis, bronchitis, cholocystitis, contact dermatitis, Crohn's CC disease, emphysema, erythroblastosis fetalls, glomerulonephritis, Good CC pasture's syndrome, gout, Grave's disease, Hashimoto's thyroiditis, CC multiple sclerosis, myasthenia gravis, osteoarthritis, osteoporosis, CC gancreatitis, polymyositis, psoriasis, Reiter's syndrome, arthritis, collis, uveitis, werner syndrome, systemic lupus erythematosus, ulcerative CC colitis, uveitis, and extracorporeal circulation, viral, bacterial, fungal CC parasitic, protozoal, and helminthic infections, trauma, or cancer. CME, or its catalytic or immunogenic fragment, is useful for drug screening

The present invention relates to human proteins (AAB61608-AAB61617) and their coding sequences (AAF28679-AAF28698). The proteins of the present invention have hydrophobic domains and can be used for the treatment of various immune deficiencies and disorders, such as severe combined immunodeficiency (SCID), multiple sclerosis, rheumatoid arthritis, autoimmune pulmonary inflammation, graft-versus-host disease and Guillain -Barre syndrome. The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in regulation of haematopoiesis or lymphoid cell deficiencies. The proteins may also have utility in compositions used for bone, cartilage, tendon and/or nerve tissue growth or regeneration as well as wound healing and in the treatment of burns. The proteins may be used in the treatment of thrombolytic and haemostatic conditions, treatment of periodontal disease and in other tooth repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment of thrombolytic and haemostatic conditions, viruses,

subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. spen the sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                    kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a bit to be a comparation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-AUG-2001; 2001US-0312147P.

The invention relates to human cDNA sequences that encode human secreted proteins. The invention also relates to an antibody that specifically binds to a polypeptide of the invention and a method of binding the polypeptide to an antibody. The polymucleotides are useful for expressing the entire secreted proteins which they encode and for distinguishing human tissues and cells from non-human tissues and cells, and for distinguishing between human tissues and cells that do or do not express the polymucleotides comprising the cDNAs. The polymucleotides and polypeptides are useful in forensic procedures or diagnostic procedures to identify individual and the polymucleotides are useful in forensic procedures or diagnostic procedures.

for expressing

or diagnostic procedures resulting from abnormal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            expression of the genes corresponding to the cDNAs. The sequences are also useful in gene therapy to control or treat genetic diseases. This sequence represents a human secreted polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.html.

human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; antiarrhritic; antipsoriatic; antiangiogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polymucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other disorders and/or conditions such as: (a) cancers; (b) disorders of the immune system; (c) anglogenesis disorders; (d) disorders of the immune system; (e) cardiovascular disorders; (f) diseases hyperproliferative disorders; (e) cardiovascular disorders; (f) diseases appotosis; (g) neurological diseases; and (h) infectious diseases. They are also used to promote wound healing.

AAA78372 to AAA78380 and AAB24436 represent sequences used in the exemplification of the present invention The polynucleotide sequence given in AAA78381 to AAA78432 encode the

Sequence 303 AA;

Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antinflammatory; ophthalmological; antirheumatic; antiarchritic; antipsoriatic; antiangiogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polymucleotides, polypeptides, antiagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other diseases, disorders and/or conditions such as: (a) cancers; (b) disorders of the immune system; (c) anglogenesis disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; and (h) associated with increase apoptosis; (g) recording would be align.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  infectious diseases. They are also used to promote wound AAA78372 to AAA78380 and AAB24436 represent sequences use exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Forty seven human nucleic acids encoding secreted proteins, useful in the treatment, prevention and diagnosis of cancers, disorders of the immune system, angiogenesis disorders, neurological diseases and hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 19;

                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC (e.g. NOV1). Also described: (1) a composition comprising a polypeptide CC (e.g. NOV1). Also described: (1) a composition comprising a polypeptide CC contrainers, the composition described above; (3) an isolated nucleic acid contrainers, the composition described above; (3) an isolated nucleic acid comprising the nucleic acid molecule described above; (3) an isolated nucleic acid comprising the nucleic acid molecule described above; (5) a cell comprising the show vector; (6) an antibody that immunospecifically CC comprising the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a cC above; (10) a method for identifying a potential therapeutic agent for cuse in treating a pathology that is related to an aberrant expression or cC aberrant physiological interactions of the polypeptide; (12) a method of capathology that is related to an aberrant expression or cC apathology associated with the polypeptide; (12) a method for modulating corrections; and can be used in gene therapy. The accidence have antidiabetic, anotropic, neuroprotective, antiparkinsonian cC syndrome associated with the polypeptide; (12) a method for modulating cacid molecule may be used to diagnose, treat or prevent metabolic construction and disorders such as Alzheiner's disease or parkinson's construction. The nucleic acids can also be used an oversious and construction. The prosent sequence represents a human NOVX from the correct invention.
                                                                                                                                                                                                                                                         र्
                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activity of NOVX polypeptides. For example, NOVX polypeptides and polynucleotides may be used to treat disorders associated with decreased expression or activity of NOVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX polynucleotides and complementary sequences may also be used as NNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NOVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of NOVX. The continuous continuous polypeptides and antagonists may also be used to modulate NOVX polypeptide expression and activity of NOVX polypeptides. The anti-NOVX polypeptide antibodies agonists and antagonists may also be used as onlypeptides and polynucleotide expression and activity of NOVX polypeptides and polynucleotides may be used in this way to prevent, disease anoversia. Center as accertance of NOVX in samples. NOVX polypeptides and treat: metabolic disorders, diabetes, obesity, infectious and security of nove of sease anoversia. Center as the carbavia center is the disorders, diabetes, obesity, infectious

                                                                                                       CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expressed in an animal subjected to pain, a method for identifying a compound which regulates CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a CC compound that regulates the activity of one or more of the specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC modulates or their antibodies. The polynucleotide or the compound that composition comprising the one or more CC injury (CCI) and spared nerve injury (chung), chronic constriction conjury (CCI) and spared nerve injury (chung), chronic constriction conjury (CCI) and spared nerve injury (chung) an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed conspecification, but was obtained, in electronic form directly from WIPO at francisc intinging a constriction at the constriction of the printed appecification, but was obtained, in electronic form directly from WIPO at francisc constriction at the constriction of the printed appecification, but was obtained, in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses a composition comprising two or more isolated is or human polynucleotides or a polynucleotide which represents a fragmen derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page; 1017pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene cc therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the clique developing products for the diagnosts or treatment of cancer, cc proliferative disorders, tumours, foetal and developmental abnormalities, diseases (rheumatoid arthritis) inflammation, allergies, neurological cdisorders (Alzheimer's diseases of the immune system, ALDS, autoimmune cdisorders (Alzheimer's disease, Parkinson's disease), cognitive disorder, cc schizophrenia, asthma, skin disorders (psoriasis), sepsis, diabetes, catherosclerosis, cardiovascular disorders, angiogenic disorders, disorders, gastrointestinal disorders, pregnancy-related disorders, cendocrine disorders, and infections. The proteins can also be used to aid comburn, to maintain organs before transplantation, for supporting cc cognate ligands or binding partners, and in chemotaxis, and can be used can a food additive or preservative to modify storage properties. The present sequence represents a human secreted protein of the invention

AAD34106-AAD34144 represent cDNAs corresponding to 17 human secreted protein genes, and AAE21578-AAE21616 represent the proteins they encode. AAE21617-AAE21627 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing. The therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the candidate the sample of the candidate they are most highly expressed, and include developing products for the diagnosis or treatment of cancer, proliferative disorders, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune disorders (Alzhelmer's diseases, Parkinson's disease), cognitive disorder, schizophrenia, asthma, skin disorders (psoriasis), sepsis, diabetes, kidney altergase cartification, astronarisation, and control of the cartification disorders, anglogenic disorders, kidney
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. The present sequence represents a human secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Seventeen nucleic acid molecules encoding human secreted proteins, useful for treating and preventing cancer, immune disorders (e.g. Addison's disease, and allergies), and cardiovascular disorders (e.g. myocardial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 11;

                                                                                                                                                                                 The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New fusion protein for treating disease e.g. albumin fused to a therapeutic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-APR-2000; 2000US-0229358P

therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digstive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alpheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and comnective disorders (e.g. osteoporosis, arthritis).
